Office Action Summary

Art Unit: 1754

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 34, 163-166, 168-170 are rejected under 35 U.S.C. 103(a) as being unpatentable over Li et al.

Li teaches an array of catalysts and making nanotubes thereon. Li does not exemplify SWNTs but indicates on pg. 1703 (left) that they could be made by optimizing conditions for their growth. Thusly, the claimed invention represents the optimization of this teaching to arrive at this result. Using catalysts which were known at the time to grow SWNTs (ie, cobalt) is an obvious expedient to form the SWNTs. The number of catalyst islands used does not impart patentability; In re rose 105 USPQ 137.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Any inquiry concerning this communication should be directed to examiner Hendrickson at telephone number (571) 272-1351.
